

LIFEWISE

Family Operating System

iOS & ANDROID — COMPLETE PRODUCT LOGIC

Expense Entry Flow | Reports | Subscription Plans | Feature Limits | Paywall Logic

DEVELOPMENT TIMELINE — 23.5 HRS REMAINING (6.5 HRS COMPLETED)

Section	Remaining	Completed
1. iOS vs Android — Key Platform Difference	2 hrs	—
2. iOS Expense Entry — 6 Smart Methods (+ Android SMS)	8.5 hrs	3.5 hrs ☒ (Camera Scan, SMS Detection)
3. Expense Display, Dashboard & Reports Logic	3 hrs	3 hrs ☒ (Monthly Report, Money Leak Detection)
4. Subscription Plans & Limits	4 hrs	—
5. Paywall Logic & UX	4 hrs	—
6. Complete Feature Availability Matrix	2 hrs	—

REMAINING: 23.5 HRS COMPLETED: 6.5 HRS (GRAND TOTAL: 30 HRS)

1. iOS vs Android — Key Platform Difference

 **Estimated Dev Timeline — Section 1: 2 hrs**

Why iOS Cannot Read SMS

Apple's iOS sandboxes every app completely. No third-party app can read your SMS inbox. This is by design for privacy. Android allows apps to request READ_SMS permission to scan incoming bank transaction messages. LifeWise on iOS must therefore rely on a different — and arguably better — set of entry methods that are user-controlled, accurate, and App Store compliant.

Capability	iOS	Android	Notes
Read incoming SMS/OTP	Not allowed	Allowed (READ_SMS permission)	Core difference
Auto-detect bank transactions	Not possible via SMS	Possible via SMS parsing	Android advantage
Camera / OCR bill scan	YES	YES	Both support ML Kit on-device OCR
Manual expense entry	YES	YES	Both full support
Voice expense input	YES	YES	Both via Whisper / native STT
Bank statement import (PDF)	YES	YES	Parse PDF via pdfjs or similar
UPI app deep link	Limited	YES	Android can query UPI apps
Push notification reminders	YES	YES	Firebase FCM both
Biometric (Face/Touch ID)	YES (Face ID)	YES (Fingerprint)	Both supported
Background location	YES (requires permission)	YES	Family Hub location feature

SECTION 2: iOS — HOW USERS ENTER EXPENSES

2. iOS Expense Entry — 6 Smart Methods

 **Estimated Dev Timeline — Section 2 overall — remaining: 8.5 hrs**

Since iOS blocks SMS reading, LifeWise iOS uses six complementary methods. Together they provide a seamless, accurate expense tracking experience — sometimes BETTER than SMS because users stay in control.

Method 1 — Manual Quick Add (Primary)

 **Estimated Dev Timeline — Method 1: 1 hrs**

iOS + Android — Available on Both Platforms

- The fastest way to log an expense. 3 taps. Accessible from: Home Screen FAB, Expenses Tab, Widget, Notification shortcut.
- TAP 1 — Open Quick Add Sheet: User taps the '+' FAB on Home screen or Expenses tab. A bottom sheet slides up instantly. No full screen navigation.
 - TAP 2 — Enter Amount + Category: Large number pad appears. User types amount. Below: horizontal scroll of category chips — Food, Transport, Medicine, Bill, Shopping, Entertainment, Health, Other. Tap any chip to select. Smart AI pre-selects last-used category for that time of day.
 - TAP 3 — Add Note + Save: One-line note field (optional). Smart suggestions based on time: '7 PM — Dinner?', '9 AM — Chai/Coffee?'. Member selector: which family member is this expense for? Default = self. Tap Save. Done in under 10 seconds.

Quick Add Screen Fields

- Amount — Large numeric keypad, required
- Category — Icon chips (Food, Transport, Bill, Medicine, Shopping, Entertainment, Health, Custom)

- Member — Who spent this? (self or any family member)
- Note — Short description, optional but suggested
- Date — Auto = today. Tap to change to past date.
- Payment Mode — UPI / Cash / Card / Net Banking (tap to select, remembers last used)
- Receipt Photo — Optional, camera icon in corner

Method 2 — Receipt / Bill Camera Scan (iOS + Android)

 **Status — Method 2 — Receipt/Bill Camera Scan: Completed / Implemented**

iOS + Android — Available on Both Platforms

User points camera at any physical bill, receipt, or invoice. App extracts data using Google ML Kit OCR (runs on-device, free, no API call).

- STEP 1 — Open Camera Scanner: User taps Camera icon on Home screen (one of the 3 quick action icons). Camera opens with document scan overlay — guide corners appear to align the receipt.
- STEP 2 — Capture & Extract: User taps capture. ML Kit processes the image on-device in 1-2 seconds. Extracts: merchant/vendor name, total amount, date, line items if visible. No data sent to server.
- STEP 3 — Review & Confirm: Extracted fields shown in editable form. User verifies amount, changes category if needed, selects member, adds note. Taps Save. Receipt image saved as attachment (optional).

OCR Extraction Logic

- Look for: TOTAL, Amount Due, Grand Total, NET AMOUNT keywords
- Extract merchant name from top of receipt
- Extract date from receipt header
- If multiple amounts found: use largest as 'Total'
- Confidence score shown: High / Medium / Low
- Low confidence = all fields editable, user must verify
- Works for: grocery bills, restaurant bills, medical bills, electricity bills, fuel receipts

Method 3 — Voice Input (iOS + Android)

 **Estimated Dev Timeline — Method 3: 2 hrs**

iOS + Android — Available on Both Platforms

User speaks the expense. App converts speech to structured expense entry using on-device speech recognition + NLP parsing.

- SPEAK — Say the expense naturally. Examples: 'Papa ke liye medicine kharidi, 350 रुपये' / 'Sabzi mandi mein 180 spend kiya' / 'Electricity bill bhara 2400' / 'Petrol 1500 dala aaj'
- PARSE — NLP Entity Extraction: App identifies Amount (350), Category (Medicine), Member (Papa), Note (medicine), Date (today). Uses simple local NLP — no API call needed. Pattern matching for Indian expense phrases.
- CONFIRM — Show parsed result for confirmation: Filled expense form shown with extracted values highlighted. User can edit any field. One tap to save. If parsing confidence is low, all fields shown empty for manual fill.

Voice Input — iOS vs Android

- iOS: Uses SFSpeechRecognizer (Apple's on-device speech engine) via @react-native-voice/voice. Supports English, Hindi, Gujarati, Marathi natively. Requires one-time microphone permission.
- Android: Uses Android SpeechRecognizer (Google's on-device engine). Same library, same languages. No API cost.
- Both: Works offline for common Indian languages. No Whisper API needed for this feature — saves cost.
- Fallback: If speech unclear, show 'Could not understand. Please type the amount.'

Method 4 — Bank Statement PDF Import (iOS Primary Method)

 **Estimated Dev Timeline — Method 4: 3 hrs**

iOS — KEY FEATURE to compensate for no SMS | Android also supported

Why This Matters for iOS

Since iOS cannot read SMS, bank statement import is the closest equivalent to Android's auto-SMS detection. User downloads PDF statement from their bank app (SBI, HDFC, ICICI, Axis, etc.) and imports it into LifeWise. App parses all transactions automatically. One import = entire month auto-populated.

- STEP 1 — Export PDF from Bank App: User opens their bank's mobile app. Goes to Statements. Downloads last 1 or 3 month PDF. iOS Share Sheet appears. Taps 'LifeWise' from share options. (LifeWise registered as PDF handler in Info.plist.)
- STEP 2 — PDF Parsing: LifeWise reads the PDF using react-native-pdf + pdfjs. Extracts all transaction rows: Date | Description | Amount | Dr/Cr. Parser handles all major Indian bank statement formats: SBI, HDFC, ICICI, Axis, Kotak, BOB, PNB, Canara.
- STEP 3 — AI Categorization: Each transaction description auto-categorized using keyword matching + AI: SWIGGY → Food, PETROL PUMP → Transport, MEDPLUS → Medicine, NETFLIX → Subscription, DGVCL → Electricity Bill, DEBIT CARD → Shopping (if no match).
- STEP 4 — Review & Bulk Confirm: List of all detected transactions shown. Each row: Checkbox | Date | Description | Auto-Category | Amount. User can: uncheck any transaction to skip, change category by tapping, assign to a family member, bulk select all → Save All.

Indian Bank Statement Format Parser Support

Bank	Format	Support	Notes
SBI	PDF password protected	YES — prompt for DOB password	Most common
HDFC Bank	PDF, clean table format	YES — high accuracy	Second most common
ICICI Bank	PDF, tabular	YES — high accuracy	
Axis Bank	PDF, multi-format	YES — medium accuracy	
Kotak Mahindra	PDF	YES	
Bank of Baroda	PDF	YES	
PNB	PDF	PARTIAL — legacy format	Best effort
Any other bank	CSV export	YES — CSV preferred	Advise user to export CSV if PDF fails

Method 5 — CSV / Excel Import

 **Estimated Dev Timeline — Method 5: 1.5 hrs**

iOS + Android — Available on Both Platforms

Most Indian banks allow downloading transactions as CSV or Excel (XLS). This is even more accurate than PDF parsing.

- STEP 1 — Download CSV from bank: Many banks (HDFC, ICICI, Axis) support CSV download in net banking or mobile app. User selects date range and downloads.
- STEP 2 — Import into LifeWise: User taps Import → Select File → picks CSV from Files app. LifeWise reads CSV with Papa Parse library. Maps columns automatically: Date, Description, Debit, Credit.
- STEP 3 — Auto categorize and save: Same categorization engine as PDF import. User reviews and confirms. CSV parsing is near 100% accurate since it's structured data.

Method 6 — Recurring Expense Templates

 **Estimated Dev Timeline — Method 6: 1 hrs**

iOS + Android — Available on Both Platforms

For predictable monthly expenses (rent, EMI, subscriptions, fixed bills), user sets up a recurring entry once. App auto-adds it every month on the correct date.

- User sets: Name, Amount, Date (e.g., 1st of every month), Category, Member
- On due date: Push notification — 'Rent of Rs. 12,000 recorded. Tap to confirm or edit.'
- One tap to confirm — expense logged. Or edit amount if different this month.

- History shows all past recurring entries.
- Smart suggestion: App detects repeating manual entries and suggests 'Make this recurring?'

ANDROID BONUS — SMS Auto-Detection (Not on iOS)

✅ **Status — Android SMS Auto-Detection: Completed / Implemented**

Android Only — NOT available on iOS

Android SMS Detection Logic

- App requests READ_SMS permission on first launch (user must approve)
- Background listener scans incoming SMS from bank sender IDs only (e.g., SBIINB, HDFCBK, ICICIT, AXISBK)
- Filters for debit transaction patterns: 'debited', 'spent', 'withdrawn', 'purchase'
- Extracts: Amount, Merchant/UPI ID, Available Balance, Date
- Creates draft expense entry — does NOT auto-save without user confirmation
- Push notification: 'Rs. 450 spent at ZOMATO detected. Tap to log.' → User taps → Quick review screen → Save
- User can set: Auto-save mode (saves without review) or Review mode (default — asks first)
- Privacy: SMS content never sent to server. Parsing is 100% local on device.
- Sender whitelist: Only messages from known bank shortcodes are parsed. Personal SMS never touched.

SECTION 3: EXPENSE DISPLAY & REPORTS LOGIC

3. Expense Display, Dashboard & Reports

🕒 **Estimated Dev Timeline — Section 3 overall — remaining: 3 hrs**

3.1 Insights Tab — Expenses Sub-Section

🕒 **Estimated Dev Timeline — 3.1 Insights Tab: 1 hrs**

The Insights tab is the home for all expense and financial data. It has 4 sub-tabs within it:

Sub-Tab	What It Shows	Primary Chart
Spending	All expenses — daily/weekly/monthly breakdown	Donut chart by category + bar chart by day
Bills	Upcoming + paid bills across all members	List view with due/paid status badges
Health \$	Medicine costs + health-related spending	Pie chart: medicine vs consultation vs tests
Reports	Monthly PDF summary, annual overview	Summary cards + export button

3.2 Spending Dashboard Screen — Detailed Layout

🕒 **Estimated Dev Timeline — 3.2 Spending Dashboard: 2 hrs**

Top Section — Summary Cards

- This Month Total — e.g., Rs. 24,500 (vs last month Rs. 21,200 — up 15%)
- Today's Spend — Rs. 850
- Remaining Budget — if budget set: Rs. 5,500 left (green if >20%, orange if <20%, red if over)
- Top Category This Month — Food Rs. 8,200 (33%)

Middle Section — Charts

- Donut Chart — Spending by category. Tap any segment to filter below list. Colors per category (Food = orange, Medicine = blue, Bills = red, etc.)
- Period Selector — Day / Week / Month / Year / Custom Range toggle at top
- Bar Chart — Daily spend for current month. Shows pattern (weekend spikes, bill payment dates)
- Member Toggle — Show all members combined or filter by one member (Papa, Mummy, Self)

Bottom Section — Transaction List

- Chronological list of all expense entries
- Each row: Category icon + Member avatar + Description + Amount + Date
- Swipe left on any row: Edit / Delete
- Tap any row: Full detail view with receipt photo if attached
- Search bar: Search by description, merchant, amount
- Filter: By category, by member, by payment mode, by date range
- Sort: Date (default), Amount (high to low), Category

3.3 Monthly Report Screen

✓ Status — 3.3 Monthly Report Screen: **Completed / Implemented**

What the Monthly Report Contains

- COVER: Month name + Total family spending
- SECTION 1: Category Breakdown — All categories, amount, % of total
- SECTION 2: Per Member Breakdown — How much each family member spent
- SECTION 3: Bill Payment Summary — All bills due, paid, missed this month
- SECTION 4: Medicine Spend — Total medicine cost per member
- SECTION 5: Top 5 Merchants / Payees this month
- SECTION 6: Month-over-Month Comparison (last 3 months)
- SECTION 7: Money Leak — Recurring small spends that add up
- SECTION 8: Savings Opportunity — Based on spending patterns
- FOOTER: Export as PDF button (Premium feature)

3.4 Money Leak Detection — Logic

✓ Status — 3.4 Money Leak Detection: **Completed / Implemented**

The system analyses transactions over 30 days and flags:

Pattern	Detection Logic	Alert Shown
Multiple streaming subscriptions	Detects 2+ charges from Netflix/Prime/Hotstar	'You pay for 3 streaming services. Save Rs. 400/month by picking 1.'
Frequent food delivery	5+ Zomato/Swiggy charges in a week	'Rs. 3,200 spent on food delivery this month. Cooking saves Rs. 2,000.'
Unused subscriptions	Same merchant charged 3 months, low usage	'You've paid Spotify for 3 months. Still using it?'
ATM cash withdrawals	Repeated large cash withdrawals	'Rs. 8,000 withdrawn as cash. Track what it's spent on.'
Round-number spending	Repeated Rs. 500, Rs. 1000 manual entries	'Some expenses may be untracked. Add notes for accuracy.'
High category spike	Any category up >50% vs last month	'Medicine spend up 80% vs last month. Check if one-time or recurring.'

SECTION 4: SUBSCRIPTION PLANS & LIMITS

4. LifeWise Subscription Plans — Complete Logic

 **Estimated Dev Timeline — Section 4 overall: 4 hrs**

Freemium Philosophy

LifeWise uses a hard-limit freemium model. Free users get REAL value — enough to hook them — but hit clear walls that make the upgrade obvious and logical. The paywall must feel like 'I need more' not 'This app is broken'. Every limit is designed to be hit within 30-60 days of regular use.

4.1 FREE Plan — Rs. 0 / month

 **Estimated Dev Timeline — 4.1 FREE Plan: 0.5 hrs**

Get started — No credit card needed

What's Included:

- Up to 2 family members only
- 3 modules per member (choose any 3 from 20)
- 10 reminders total (across all members combined)
- 7 days of expense history
- Basic spending summary (current month only)
- 1 bill per member (max 2 bills total)
- 1 document stored (Aadhaar or PAN only)
- Voice reminder — 5 uses per month
- Bill scan — 3 scans per month
- WiseAI chat — 5 messages per month
- Push notifications — ALL included (no limit)
- iOS + Android — full app access
- No ads — ever

Hard Limits (shows paywall):

- Cannot add 3rd family member → paywall
- Cannot add 4th module for any member → paywall
- 11th reminder → paywall
- Expense history older than 7 days hidden → paywall
- PDF export not available → paywall
- Cannot view monthly report → paywall
- Cannot import bank statement → paywall
- Cannot set budget limits → paywall
- 2nd document → paywall
- 6th voice reminder in month → paywall
- 4th bill scan → paywall
- 6th WiseAI message → paywall

4.2 STARTER Plan — Rs. 99/month

 **Estimated Dev Timeline — 4.2 STARTER Plan: 0.5 hrs**

Rs. 99 / month | Rs. 799 / year (33% off) — Perfect for a small family or couple

What's Included:

- Up to 4 family members

- 8 modules per member (any 8 from 20)
- 50 active reminders total
- 3 months expense history
- Monthly spending summary + basic charts
- 5 bills per member
- 10 documents stored (all types)
- Voice reminder — 30 uses per month
- Bill scan — 20 scans per month
- WiseAI chat — 30 messages per month
- Bank statement PDF import — 1 per month
- Basic monthly report (in-app only, no PDF export)
- 1 caregiver per family member
- Recurring expense templates — up to 10
- Family noticeboard — 20 posts/month

Hard Limits (shows paywall):

- Cannot add 5th family member → upgrade to Family plan
- 9th module per member → upgrade
- 51st reminder → upgrade
- History beyond 3 months → upgrade
- PDF export of reports → upgrade to Family/Pro
- Multiple bank statement imports per month → upgrade
- More than 1 caregiver per member → upgrade

4.3 FAMILY Plan — Rs. 199/month (RECOMMENDED)

Estimated Dev Timeline — 4.3 FAMILY Plan: 1 hrs

Rs. 199 / month | Rs. 1,499 / year (37% off) — The complete family operating system

What's Included:

- Unlimited family members
- All 20 modules per member
- Unlimited active reminders
- 12 months expense history
- Full spending dashboard — all charts, all filters
- Unlimited bills tracking
- 50 documents stored (all types, all members)
- Voice reminder — unlimited
- Bill scan — unlimited
- WiseAI chat — 100 messages per month
- Unlimited bank statement PDF imports
- Full monthly + annual reports
- PDF export of all reports
- Unlimited caregivers per member
- Unlimited recurring expense templates
- Family noticeboard — unlimited
- Money Leak detection and alerts
- Budget alerts per category per member
- Family location sharing — up to 6 members
- Emergency SOS for all members
- Medicine stock tracker + refill alerts
- Health vitals graph (12 months)

- Priority push notifications
- Dark mode + custom themes
- CSV / Excel import — unlimited

Hard Limits (shows paywall):

- WiseAI beyond 100 messages → purchase add-on credits
- Documents beyond 50 → upgrade to PRO
- White-label or business use → PRO plan

4.4 PRO Plan — Rs. 499/month

Estimated Dev Timeline — 4.4 PRO Plan: 1 hrs

Rs. 499 / month | Rs. 3,999 / year — Power users, large families, business use

What's Included:

- Everything in FAMILY plan
- Unlimited documents (unlimited storage)
- WiseAI chat — 300 messages per month
- Annual health report PDF (doctor-ready format)
- Family finance annual report
- Priority customer support (24hr response)
- Early access to new features
- Multi-language reports (Hindi, Gujarati)
- Custom expense categories (unlimited)
- Data export — full JSON backup of all family data
- Pill identifier by photo (beta feature)
- Medicine interaction checker
- Insurance claim assistant wizard
- WhatsApp reminder integration (beta)
- 5 sub-accounts (for joint family / business)

Hard Limits (shows paywall):

- Sub-accounts beyond 5 → custom enterprise pricing
- White-label for businesses → contact us

4.5 Plan Comparison Table

Estimated Dev Timeline — 4.5 Plan Comparison Table: 1 hrs

Feature / Limit	FREE	STARTER Rs.99	FAMILY Rs.199	PRO Rs.499
Family Members	2	4	Unlimited	Unlimited
Modules per Member	3 of 20	8 of 20	All 20	All 20
Active Reminders	10 total	50 total	Unlimited	Unlimited
Expense History	7 days	3 months	12 months	Unlimited
Bill Tracking	1/member	5/member	Unlimited	Unlimited
Documents	1	10	50	Unlimited
Voice Reminder	5/month	30/month	Unlimited	Unlimited
Bill Scan (OCR)	3/month	20/month	Unlimited	Unlimited
WiseAI Chat	5 msgs	30 msgs	100 msgs	300 msgs
Bank PDF Import	Not available	1/month	Unlimited	Unlimited
PDF Reports	Not available	Not available	YES	YES

Caregivers	None	1/member	Unlimited	Unlimited
Location Sharing	Not available	Not available	Up to 6	Unlimited
Money Leak Alerts	Not available	Not available	YES	YES
Medicine Interaction Check	Not available	Not available	Not available	YES
WhatsApp Reminders	Not available	Not available	Not available	BETA
Priority Support	No	No	No	YES

SECTION 5: PAYWALL LOGIC & UX

5. Paywall — When, How & What to Show

 **Estimated Dev Timeline — Section 5 overall: 4 hrs**

5.1 Paywall Trigger Events

 **Estimated Dev Timeline — 5.1 Paywall Trigger Events: 1 hrs**

The paywall must never feel like a punishment. It appears exactly at the moment the user tries to go beyond their limit. The copy is empathetic, not aggressive.

Trigger Event	User Action	Paywall Message	Recommended Plan
3rd member on Free	Taps '+ Add Member'	'You're building a bigger family hub! Add unlimited members with LifeWise Family.'	FAMILY Rs.199
4th module on Free	Taps a locked module	'[Module name] is a premium feature. Upgrade to manage more aspects of [Member]'s life.'	STARTER Rs.99
11th reminder on Free	Saves a new reminder	'You're staying on top of things! Unlimited reminders available in Starter and above.'	STARTER Rs.99
8+ day expense history	Scrolls past 7 days	'Older expenses are stored safely. Unlock 12-month history to see the full picture.'	STARTER Rs.99
PDF export attempt	Taps Export Report	'Download your family's health and finance report. Available in Family plan and above.'	FAMILY Rs.199
Bank PDF import	Taps Import Statement	'Auto-fill all your expenses from your bank statement. One tap, whole month done.'	STARTER Rs.99
Budget alerts setup	Tries to set category budget	'Set spending limits for each family member. Keep your family's finances on track.'	FAMILY Rs.199
4th bill scan	Scans 4th receipt in month	'Scan unlimited bills and receipts with Family plan.'	FAMILY Rs.199
6th WiseAI message	Types 6th message	'You're chatting with WiseAI! Get 100 messages/month with LifeWise Family.'	FAMILY Rs.199
2nd document	Uploads 2nd document	'Store all your family's Aadhaar, PAN, Passport safely. Family plan = 50 documents.'	FAMILY Rs.199
Location sharing	Taps location feature	'See where your family members are in real-time. Stay connected safely.'	FAMILY Rs.199
Medicine interaction	Taps check interaction	'Check if medicines are safe together. Pro plan keeps your family safe.'	PRO Rs.499

5.2 Paywall Screen Design Spec

 **Estimated Dev Timeline — 5.2 Paywall Screen Design Spec: 1 hrs**

Paywall Bottom Sheet (Soft Paywall — for first 3 triggers)

- Slides up from bottom as a sheet (does not take full screen)
- Top: Illustration relevant to the feature being locked (not generic)
- Headline: Benefit-focused, not limit-focused. 'Manage your full family' not 'You've hit the limit'
- 3 plan pills horizontally: STARTER | FAMILY | PRO with prices
- FAMILY pre-selected with gold highlight and 'Most Popular' badge
- Feature checklist: 3-4 benefits of upgrading, specific to the feature that was blocked
- CTA button: 'Start 7-Day Free Trial' (first time ever) OR 'Upgrade Now'
- Secondary link: 'See all plan features' (opens full comparison)
- 'Continue on Free' dimmed link at bottom (lets user dismiss)

Paywall Full Screen (Hard Paywall — after 3 soft dismissals)

- Full screen takeover — cannot dismiss
- Shown only when a CRITICAL limit is hit: member limit or reminder limit
- Shows full plan comparison table
- Exit button only in top corner — no 'Continue on Free' option
- Timer: 'Your 7-day trial expires in X days' if trial is active

5.3 Free Trial Logic

🕒 Estimated Dev Timeline — 5.3 Free Trial Logic: 0.5 hrs	
Trial Aspect	Rule
Trial Period	7 days of FAMILY plan — fully unlocked, no restrictions
Who gets it	Every new user on first install — automatically activated on day 1
Credit card required	NO — trial starts immediately. Card only needed when converting.
Reminder before expiry	Day 5: 'Your trial has 2 days left. 80% of trial users upgrade.'
Day 7 notification	'Your LifeWise Family trial ends today. Upgrade to keep all features.'
After trial ends	Account reverts to Free plan limits. Data is KEPT — not deleted. But hidden beyond limits.
Can trial be restarted	NO — only once per account. Prevents abuse.
Trial for paid plan upgrades	Yes — Starter to Family: 7-day trial of Family features before billing.

5.4 In-App Purchase Implementation

🕒 Estimated Dev Timeline — 5.4 In-App Purchase Implementation: 1.5 hrs

iOS — Apple In-App Purchase (StoreKit 2)

- Use react-native-iap or expo-in-app-purchases library
- All subscriptions must go through Apple IAP — cannot use direct payment on iOS
- Apple takes 30% commission (15% if annual revenue under \$1M via Small Business Program)
- Products to register in App Store Connect: lifewise_starter_monthly, lifewise_starter_yearly, lifewise_family_monthly, lifewise_family_yearly, lifewise_pro_monthly, lifewise_pro_yearly
- Subscription management: User can cancel/change via iOS Settings > Apple ID > Subscriptions
- Backend must verify receipt with Apple's verifyReceipt API after purchase
- Use RevenueCat SDK to simplify cross-platform subscription management

Android — Google Play Billing

- Use react-native-iap or expo-in-app-purchases library (same library, both platforms)
- Google Play Billing required for in-app purchases on Android
- Google takes 15% commission on first \$1M revenue (reduced from 30%)
- Same product IDs registered in Google Play Console
- Subscription management: User manages via Google Play > Subscriptions
- Backend verifies purchase token via Google Play Developer API

- RevenueCat handles both iOS and Android subscription status in one dashboard — highly recommended

RevenueCat — Why Use It

- Single SDK for iOS + Android subscription management
- Handles: purchase verification, subscription status, trial tracking, cancellation webhooks
- Free up to \$2,500 MRR. Then 1% of revenue.
- Dashboard shows: MRR, churn, trial conversions, LTV — all in one place
- Install: `npx expo install react-native-purchases`

SECTION 6: COMPLETE FEATURE AVAILABILITY MATRIX

6. Every Feature — iOS / Android / Plan Availability

 **Estimated Dev Timeline — Section 6 overall: 2 hrs**

The table below maps every LifeWise feature to its platform availability and which plan unlocks it. This is the complete developer reference for implementing feature gates.

— EXPENSE ENTRY —
